

Your CES Solar Site Analysis!

Thank you for scheduling with CES to receive a Solar Site Analysis. You've taken the first step to reducing your utility bills and your carbon footprint! Your analysis will take approximately 1-2 hours and is invoiced on the day of service. The \$150 payment will be credited toward any solar project you choose to do. Payments may be made by check, credit card or online at metrogutter.com (CES is a subsidiary of our 20 yr parent company, Metro Gutter and Home Services, Inc.)

During your solar site analysis, your Clean Energy Consultant will take a detailed investigative look at your property's potential to produce electricity with solar energy. Before the clean energy consultant visits your house, please gather any utility bills for as much of the past 12 months as possible. This will allow us to provide cost saving estimates for an appropriately sized array or collector plan. (Your utility can get these for you.)

What to Expect: Our clean energy consultants will review the exterior of the home, noting orientation to the sun, and any object or structures blocking the sun. They will then access the roof to use a specialized device called a Solmetric Suneye. With this tool, we can identify specific shade-causing obstructions such as trees or structures and know instantly how much additional energy would be produced if the obstruction were removed. This lets you know what and where, if any, trimming might be needed, right down to the specific branches. It's equally useful for PV, passive hot water, roof mount or ground-mount systems.

Once we've taken photos in the four corners of an optimal installation area, we will examine the home's junction box and take pictures for the planning and design phase.

Following the logistical analysis, our clean energy consultant will meet with you to review utility bills, discuss potential savings, and provide rough estimates of initial costs, as well as any State, Federal, and County incentives you are eligible for.

The consultant will then schedule a return appointment to preset a proposal with specific pricing, hardware, incentive, and scheduling information on a Solar PV and/or Solar thermal plan.
